Industry

Healthcare and Mobile Medical equipment supplier

Customer need

The customer wanted the software to record the time & attendance data of their field service workers and ultimately export this data to their payroll system like ADP.

Workflow with allGeo

allGeo provided them with an effortless solution for the entire field service workflow. With the allGeo mobile app, they were able to record the attendance of their employees using customizable time clock buttons like Start Shift, End Shift, etc. With the help of Geofencing, they were able to locate the arrival and departure of an employee from a certain location. With real-time GPS location and tracking, they identified the exact location of any employee generated reports with exact time and location. Finally, with the help of allGeo and ADP connectors, they set up a zero-touch process to export the logs to the payroll system at the end of the daily shifts.

Here are some of the reports we can refer to for the account implementation

- **Breadcrumb Report:** In this report, you get the exact location of employees at any given point of time and the hours they spent at that location.

- **Basic Manual Report:** This report shows the start day location and time, end day location and time, the time spent at that location and the miles traveled between those locations.

- **Standard Manual Report:** This report shows the time clock punches and their locations of the entire day, miles (distance) between those punches, and notes or messages taken during that punch.

- **ADP TimeCards Report:** This report shows you all the data with time and hour exported to ADP for payroll processing.traveled between those locations.

- **Data Upload to sFTP server & ADP:** - These reports are uploaded to their internal server via the sFTP process on a daily basis.
  - At the same time, Time Cards are also being uploaded to ADP.

- **Connector:** With the help of connectors and API, we can directly export the employees timecards into ADP without any human intervention.
